Refresh Scan Feature: Running a Scan in BrandSek

The **Refresh Scan** button in BrandSek allows you to initiate or manually run a scan for a specific client. This feature is useful when you need to perform an immediate check for vulnerabilities or updates to the client's security posture.

Instructions to Run a Scan

1. **Access the Client Panel**:
   - Log in to the BrandSek platform.
   - Go to the **Client Panel**: https://panel.brandsek.com/clients.
2. **Locate the Client**:
   - Use the search bar to find the client by name, or scroll through the list of clients on the dashboard.
3. **Run a Scan**:
   - In the **Actions** column next to the client's entry, click on the **"Refresh"** button.
   - This action will initiate a new scan for the client's domains, IPs, and services based on the configured settings.
4. **Monitor the Scan Progress**:
   - Once the scan begins, you may see a progress indicator or notification.
   - Wait for the scan to complete. Depending on the scope of the client's assets, the scan may take a few minutes.
5. **View Scan Results**:
   - After the scan finishes, updated results will be available in the client's **Details** section.
   - Click **"Show Details"** in the **Actions** column to review the findings, including any detected vulnerabilities or threats.

Key Benefits of Running a Scan

- **Immediate Updates**: Ensures the latest threat intelligence and vulnerability assessment for the client.
- **Proactive Security**: Identifies new risks or changes in the attack surface.
- **Customizable Scope**: Automatically checks all configured domains, IPs, and services tied to the client.
